History 100

Dr. Kennedy

Lesson #7 APA

The greatest challenge to operational success was being able to create an attack that penetrated deeply. More specifically, getting enough supplies to concentrate on a single objective in order to penetrate deeply then being able to keep supplying them when inside the front lines. For example, if you wanted a quick and concentrated attack it will penetrate but the operational challenge is being able to keep supplying them while taking heavy fire. This annihilation tactic against a strong army like Germany won't work very well, because Germany is a lot more efficient at bringing troops and resources to the front line. This is why in the beginning of WW1 France struggled against the grand German-Austria-Hungary army and its superior technological advancements and military professional. In fact, France almost lost the war very early on but was able to hang on due to its alliances and the use of attrition and exhaustion. Additionally, there was a tradeoff between a successful attack and number of casualties amassed. This is not only an operational challenge of making sure you have enough troops for later battles, but also a moral dilemma. At some point the number of deaths outweighs the success of a battle.

Documentation Statement:

From creation to completion of this assignment I used no outside resources besides the instructed game and what I have learned and read in class. This work represents my own intellectual understanding and is original.
